

CSCU9N5 Assignment Testing

BEFORE THE PRACTICAL:

Prepare your assignment, but note that it need not be completely finished to do usability testing: you might only test part of the functionality and UI. Do your own technical tests. Draw up a test script for user testing.

If you're unsure what to do, go back to practical 5 on testing and the usability testing lecture.

In this session, you have to demonstrate that you are able to carry out user testing for your assignment. You must come prepared with a testing script. We will work in groups in the lab to carry out the tests.

You should have already done your own technical testing on your implementation. Bring notes describing briefly the tests that you have done.

You may use the results of this testing to further improve your implementation before you submit the assignment.

Testing in a group

Form into groups of three people. Each of you will take turns in being

- the user
- the facilitator
- the observer

We'll run multiple tests, so there will be a chance to switch roles.

Make sure Prof Shankland sees your notes about your own testing and your test script for today.
